

"A Ball On A Table" Video Carving Tutorial - By Madcarver

Hi there. Thank you for getting this video. Below you will see some notes that you may find helpful.

Tools used for this project:

- Basswood block
- Rubber mat
- Ballpoint tracing Stylus
- Pencil
- Ruler
- Woodcarving Chisels

Madcarver Recommends:

1. The wood used is Basswood. Use whatever wood you like, though a wood species that is easy to carve. The size Madcarver used was about 3.5"x6.0"x1.0"
 - a) Use whatever sized wood block you'd like as long as the full pattern fits atop the wood.
2. Use of a rubber router mat to arrest movement of the wood stock when you are working on it. You can find this mat on [Amazon](#).
3. Use a ballpoint tracing stylus. You can save a lot of money over the years when not buying carbon paper. It can be found here on [Amazon](#).
4. Any generic pencil & ruler will do.
5. I have partnered with a company that sells Schaaf Chisels. I recommend them, and you can see my reviews of them [here](#). These chisels are top notch and I wish they were around when I was starting out. The best thing is that they are a third of the cost of their competitors and can be purchased from Bear Woods [here](#). The wood carving chisels used in this tutorial were gathered over my many years of wood carving, and I still used a few of the Schaaf chisels in it.

If you enjoyed the tutorial, intend on getting more, have any suggestions for future tutorials, or just want to ask a question feel free to contact me at randy@madcarver.com.

Thanks,

Randall Stoner, aka Madcarver
